

GIT BUILT · A SUBSIDIARY OF IMAGINARIUM

THE AI DELEGATION LOOP

Free Starter Kit

Stop building 15 half-broken agents.
Build ONE agent with a playbook — and get real work out of AI.

GIT BUILT · A SUBSIDIARY OF IMAGINARIUM

BUILD IDEAS. BREAK LIMITS. MAKE IMPACT.

One agent. One playbook. Real output.

Most people build a separate AI agent for every job — email, content, leads, reports, support — then try to wire them all together. The result: 15 half-built agents that work half the time and eat your week in maintenance.

The people getting real leverage from AI do the opposite. They run ONE capable agent and hand it a playbook for every job. The playbook is just three files:

- 01 PROCESS — how YOU do the job**
- 02 TOOLBOX — your approved prompts & templates**
- 03 PROOF — the checklist it must pass before shipping**

This kit gives you all three — with copy-paste prompts to build each one today.

BUILD IDEAS. BREAK LIMITS. MAKE IMPACT.

Document how YOU do it.

Don't write the SOP yourself. Make the AI interview YOU — it asks better questions than you'll think to answer. Paste this into ChatGPT or Claude:

COPY-PASTE: THE INTERVIEW PROMPT

Act as a world-class operations consultant. I want to document my process for [JOB] so an AI agent can execute it exactly the way I do.

Interview me ONE question at a time. Ask about:

- What triggers this job to start
- Every step, in order, with nothing skipped
- The tools and logins involved
- Decisions I make along the way, and how I make them
- What "done right" looks like
- The mistakes a beginner always makes

Keep asking until you can write the full process back to me as a numbered SOP. Ask your first question now.

Save the result as PROCESS-[job].md. That's file one. Do it for every job you want the agent to run.

BUILD IDEAS. BREAK LIMITS. MAKE IMPACT.

Your approved weapons.

Your agent is only as good as the raw material you feed it. The toolbox is a folder of everything already proven to work — linked from the playbook so the agent reaches for it every time.

YOUR TOOLBOX FOLDER STRUCTURE

```
TOOLBOX/  
voice-examples.md      <- 5-10 samples of YOUR writing  
hooks-that-worked.md   <- your best openers, with notes  
offer-one-pagers.md    <- what you sell, in plain words  
banned-list.md         <- words/phrases you never use  
templates/             <- your reusable formats
```

Rule: if the agent ever produces something off-brand, don't argue with the chat — add the correction to the toolbox. The toolbox compounds. The chat doesn't.

BUILD IDEAS. BREAK LIMITS. MAKE IMPACT.

Nothing ships unchecked.

This is the file that separates toys from systems. Before your agent delivers anything, it must pass every item on the PROOF checklist. Example for content:

- [] Hook lands in the first line
- [] One idea per post — no rambling
- [] Written in my voice (see voice-examples.md)
- [] CTA included and specific
- [] Zero words from banned-list.md
- [] Formatted for the platform it's posting to

COPY-PASTE: THE PROOF INSTRUCTION

Before you show me any output, run it against PROOF.md line by line. For every item you fail, fix it and re-check. Only show me output that passes 100%. List which checklist version you passed.

BUILD IDEAS. BREAK LIMITS. MAKE IMPACT.

Fix the playbook. Not the chat.

Every time your agent gets it wrong, resist the urge to re-prompt in the chat. Open the playbook instead: was the PROCESS unclear? Is the TOOLBOX missing an example? Is the PROOF checklist too weak? Fix the file, and every future run gets better forever.
