

The Imaginarium Workbook: A Curriculum Blueprint

1. Workbook Overview and Mission Statement

The Imaginarium Workbook is a groundbreaking curriculum designed to empower individuals with advanced skills in AI content creation, video generation, prompt engineering, and workflow building. It serves as a comprehensive guide for navigating the rapidly evolving landscape of artificial intelligence, transforming abstract ideas into tangible digital assets. Our mission is to cultivate a new generation of AI-literate creators, equipping them with the frameworks, tools, and practical experience necessary to innovate and excel in the digital age.

This workbook, envisioned as a multi-platform educational product, integrates theoretical knowledge with hands-on application, fostering a deep understanding of AI capabilities and limitations. It aims to demystify complex AI concepts, providing a structured pathway for learners to master AI user skills at a 201 level and beyond [1].

2. Chapter-by-Chapter Outline

The Imaginarium Workbook is structured into comprehensive chapters, each building upon the last to provide a holistic learning experience. Each chapter includes a clear title, detailed description, specific learning objectives, and key content areas.

Chapter 1: Foundations of AI Creativity: The Ideas to Content Pipeline

Description: This introductory chapter lays the groundwork for AI content creation by introducing the fundamental pipeline that transforms raw ideas into polished digital content. It emphasizes the critical first steps of ideation and digitization, setting the stage for AI-powered generation.

Learning Objectives: Upon completing this chapter, learners will be able to understand the complete Ideas to Content Pipeline, from the initial conception of an idea to the final creation of a digital asset. They will master various techniques for externalizing their thoughts and capturing ideas effectively, including the digitization of handwritten notes for AI processing. Furthermore, learners will be able to identify and select from a variety of AI platforms that are suitable for initial content generation.

Key Content: Key content for this chapter includes understanding the importance of initial ideation and brainstorming, exploring various methods for capturing ideas (such as writing on paper), and learning effective digitization techniques (e.g., taking photos of notes). The chapter will also introduce learners to prominent AI platforms for content generation, including Claude, Gemini, ChatGPT, and GenSpark [1], and provide an overview of potential outputs such as new content, refined prompts, workflows, applications, and no-code tools [1].

Chapter 2: The WAT Framework: Building Intelligent Workflows

Description: This chapter delves into the core of AI workflow design: the Workflows, Agents, and Tools (WAT) Framework. Learners will understand how to conceptualize, structure, and optimize AI-driven processes by integrating these three synergistic components.

Learning Objectives: By the end of this chapter, learners will comprehend the fundamental principles of the WAT Framework and its practical application in AI solutions. They will be able to differentiate between Workflows, Agents, and Tools within an AI system, and gain the skills to design and implement AI-driven workflows for a variety of tasks. Furthermore, learners will understand how to effectively integrate specialized AI models and APIs as tools within these workflows.

Key Content: Key content includes a detailed explanation of Workflows, covering sequential tasks, logical progression, trigger events, and decision points [1]. The chapter will provide an in-depth look at Agents, focusing on their autonomy, execution capabilities, and decision-making processes [1]. Learners will explore various Tools, such as specialized AI models, APIs, and software utilities like Claude Code [1]. Emphasis will also be placed on system architecture principles for ensuring seamless interaction between WAT components [1], and practical applications will be demonstrated, including summaries, reminders, email flagging, application control, and calendar management [1].

Chapter 3: Mastering Prompt Engineering: The Art of AI Communication

Description: This chapter focuses on the critical skill of prompt engineering, teaching learners how to craft effective prompts to maximize the utility and quality of AI model outputs. It covers advanced strategies for various AI applications, particularly in video generation.

Learning Objectives: Upon completing this chapter, learners will develop advanced prompt engineering techniques for diverse AI models. They will understand the nuances of structural prompting and advanced frameworks, learn to apply keyframe strategies for optimal AI video generation, and master the use of a Camera Moves Master List to guide AI in creating dynamic visual content.

Key Content: Key content for this chapter includes the **Prompt Cannon** approach, which emphasizes structural integrity and advanced frameworks over minute details for robust prompt design [1]. Learners will also be introduced to **Structured PARSa**, a systematic approach to prompt creation for consistent and high-quality outputs [1]. The chapter will delve into **Keyframe Strategies**, explaining the crucial interplay between keyframe quality and prompt detail for video generation, contrasting the effectiveness of good keyframes with short prompts versus weak keyframes requiring perfect and detailed prompts [1]. Furthermore, a **Camera Moves Master List** will be presented, offering a curated collection of cinematic movements such as Dolly Out/Pull back, Dolly In/Zoom In, Robotic Arm/Rig, Fast Lateral Passes, and Snappy Acceleration, to guide AI video generation [1]. The chapter will also cover advanced techniques like negative prompting (e.g., MiniMax M2.1 for “NO SHAKE”) [1] and achieving artifact-free generation (e.g., Midjourney 7) [1].

Chapter 4: AI Video Generation Ecosystem: From Concept to Cinematic Output

Description: This chapter provides an in-depth exploration of the diverse landscape of AI tools and models specifically designed for generating dynamic visual content. It covers various platforms, their unique features, and applications in video production, guiding learners through the process of creating high-quality AI-generated videos.

Learning Objectives: Upon completing this chapter, learners will be able to identify and differentiate between various AI video generation tools and models, understanding the specific capabilities of leading platforms such as Vidu Q3, Sora 2,

and Qwen 2.5. They will learn to integrate different tools for comprehensive video production, encompassing scriptwriting, storyboarding, and element generation. Furthermore, learners will apply advanced techniques for ensuring consistency, performing transformations, and utilizing specialized camera movements in AI video creation.

Key Content: Key content for this chapter includes an exploration of **Long Video Models** such as Vidu Q3, recognized as China's leading model, offering features like reference voice support, image-to-video, text-to-video capabilities, and mid-scene camera angle switching [1]. Learners will also delve into techniques for **Transformations & Consistency** using tools like FALAI (Kling API), Kling Omni for transformations, Sora 2 for storyboards and extreme close-ups for consistency, and Kling for face preservation [1]. The chapter will cover **Prompting & Quality** aspects, including negative prompting with MiniMax M2.1 to achieve effects like "NO SHAKE," and ensuring artifact-free generation with tools like Midjourney 7 [1]. Specialized **Camera Movements** will be taught using Haimeta for fast lateral passes, POV shots, and locked rigs [1]. For **Comprehensive Production**, Qwen 2.5 will be introduced for its ability to read video, create videos, write scripts, storyboard, generate elements, and automate content generation [1]. **Storytelling & World Generation** will be explored through Runway Gen 4.5 for storytelling workflows and Genie 3 for world generation [1]. The importance of **Structured Prompting** will be highlighted with Seedance 2 (prompt guide, action grid, 4K output, storyboard, main characters) and Higgsfield/CinemaStudio (prompt guide) [1]. Additionally, the chapter will cover **API Access** via Grok Imagine API [1], and introduce tools for audio generation such as Eleven Labs and Suno [1], as well as video editing and post-production tools like CapCut and DaVinci [1].

Chapter 5: Second Brain Architecture: Building Your Personal AI Knowledge Hub

Description: This chapter introduces the concept of a "Second Brain" as a personal, portable, and robust knowledge management system. It emphasizes architectural principles over specific tools, ensuring longevity and adaptability in the ever-changing AI landscape.

Learning Objectives: Upon completing this chapter, learners will understand the core principles of building a Second Brain for AI knowledge management. They will learn to design a portable and tool-agnostic knowledge architecture, identify and utilize

recommended tools for storage, organization, and collaboration, and apply the Meta Agent Protocol and MetaBuild Pattern for a structured approach to knowledge building.

Key Content: Key content for this chapter includes a deep dive into the **Core Principles** of building a Second Brain. This includes treating knowledge system development as a formal project, the importance of engaging with peer building communities, and emphasizing a portable architecture through the Meta Agent Protocol. The chapter will also distinguish between portable infrastructure and non-portable tools, and introduce concepts like dependency injection and the MetaBuild Pattern [1]. Additionally, the chapter will provide recommendations for **Storage & Tools**, including Notion for general organization, Dropbox for structured data storage, Discord for community interaction, and VPS/Cloud for hosting [1].

Chapter 6: AI User Skills (201 Level): Advancing Your AI Literacy

Description: This chapter elevates the learner's AI proficiency to a 201 level, focusing on advanced skills for effective interaction with and leveraging of AI. These skills go beyond basic usage, enabling users to optimize AI input, critically evaluate output, and integrate AI into complex workflows.

Learning Objectives: Upon completion of this chapter, learners will develop advanced AI literacy, enabling strategic interaction with AI models. They will master the art of Context Assembly, providing high-quality information to AI, and hone their Quality Judgment to discern when to trust and when to verify AI outputs. Furthermore, learners will learn Task Decomposition to break down complex problems into AI-manageable chunks and practice Iterative Refinement for a structured approach to drafting and refining AI-generated content.

Key Content: Key content for this chapter includes a detailed exploration of Context Assembly, focusing on providing relevant and high-quality information to AI and understanding AI's sensitivity to input data quality [1]. Learners will also delve into Quality Judgment, learning when to trust AI outputs and when to verify, along with understanding model behavior and potential failure points [1]. The chapter will cover Task Decomposition, teaching how to break complex tasks into AI-manageable chunks [1], and Iterative Refinement, emphasizing a structured approach to drafting and refining AI-generated content [1]. Additionally, Workflow Integration, which involves seamlessly embedding AI tools and processes into existing workflows [1], and Frontier Recognition, building explicit knowledge of AI's capabilities and limitations [1], will be

discussed. The chapter will conclude by highlighting the significant advantage gained through Technical Skills in effectively leveraging AI [1].

Chapter 7: Exploring the Frontier: Chinese Open Source LLMs

Description: This chapter introduces learners to the growing importance of Chinese open-source Large Language Models (LLMs). It provides guidance on where to access them, how to deploy them, and their potential applications in various AI workflows.

Learning Objectives: Upon completing this chapter, learners will recognize the significance of Chinese open-source LLMs in the global AI ecosystem. They will be able to identify main model hubs and platforms for accessing these models, understand different deployment options including cloud and local solutions, and explore the capabilities of specific models like Qwen and Kimi K2.5.

Key Content: Key content for this chapter includes an overview of **Main Model Hubs** such as Huggingface, which hosts models like Qwen, DeepSeek, GLM, and Baichuan, and GitHub, where various QwenCode and other LLM repositories can be found [1]. Learners will also explore different **Cloud Platforms** for deployment, including Azure Foundry, Groq, and together.ai [1]. For **Local Deployment**, the chapter will introduce Ollama [1]. Finally, the capabilities of **Specific Models** like Kimi K2.5, which offers NVIDIA Free API access, will be examined [1].

3. Integration of Series/Content Brands

The Imaginarium Workbook incorporates several distinct series and content brands, each serving a specific purpose within the curriculum. These brands provide a unique lens through which to explore the concepts and tools presented in the workbook.

Brand	Description	Integration into Curriculum -
7 days Skooly	A week-long intensive program designed to rapidly build foundational AI skills.	This series will be integrated as a fast-track introductory module, covering the core concepts of the Ideas to Content Pipeline and the WAT Framework. It will serve as a prerequisite for more advanced topics. -
Napoleon Pill	A series focused on strategic thinking and leadership in the context of AI.	This series will be woven into the curriculum as a recurring theme, with “Napoleon Pill” sidebars and exercises that challenge learners to think strategically about AI implementation and workflow design. -
Pillar Prophecy	A forward-looking series that explores the future of AI and its potential impact on society.	This series will be presented as a concluding module in the workbook, encouraging learners to think critically about the long-term implications of AI and their role in shaping its future. -
Stream Chaserz	A series focused on the economic aspects of AI content creation and monetization.	This series will be integrated into the later chapters of the workbook, providing practical guidance on how to monetize AI-generated content and build sustainable business models around AI skills. -

4. Daily Practice Schedule and Routine

The Imaginarium Workbook promotes a structured daily practice routine to reinforce learning and build practical skills. The following schedule is a recommended guideline for learners to immerse themselves in the world of AI content creation.

Time	Activity	Focus -
8:00 AM - 9:00 AM	NotebookLM	Building and refining the Second Brain, organizing notes, and structuring knowledge. -
9:00 AM - 12:00 PM	Claude (Opus, Cowork, Code)	Applying the WAT Framework, engaging in prompt engineering, and working on coding projects. -
12:00 PM - 1:00 PM	Lunch	Break and reflection. -
1:00 PM - 5:00 PM	Antigravity & Higgsfield AI	Deep dive into AI video generation, working with advanced tools and platforms. -
5:00 PM - 7:00 PM	CapCut / DaVinci & Eleven Labs / Suno	Post-production, video editing, and audio integration. -
7:00 PM - 8:00 PM	Opus Clips / N8N	Workflow automation and content repurposing. -

5. Homework, Challenges, and Community Elements

The Imaginarium Workbook is designed to be an interactive and collaborative learning experience. Homework, challenges, and community elements are woven into the curriculum to reinforce learning, encourage practical application, and foster a supportive community of AI creators.

- **Homework:** Each chapter will conclude with a set of homework assignments that require learners to apply the concepts and tools they have learned. These assignments will range from prompt engineering exercises to creating short AI-generated videos.
- **Challenges:** The workbook will feature regular challenges that push learners to be creative and innovative. These challenges will be designed to be shared within the Skool community, fostering a spirit of friendly competition and collaboration.
- **Skool Community:** The Skool community will serve as the central hub for learners to connect, share their work, ask questions, and collaborate on projects. It will be a space for peer-to-peer learning and support, with dedicated channels for each chapter and content series.

- **Help Wanted:** The “Help Wanted” section will be a dedicated space within the Skool community where learners can post requests for collaboration on projects, seek assistance with specific challenges, or offer their skills to others.

6. Suggested Delivery Format

The Imaginarium Workbook is envisioned as a multi-platform educational product, delivered through a combination of physical and digital formats to provide a rich and flexible learning experience.

- **Physical Workbook:** A beautifully designed, interactive physical workbook will serve as the core of the curriculum. It will contain all the chapter content, exercises, and space for learners to take notes and sketch out ideas.
- **Web App:** A companion web app will provide a digital home for the Imaginarium community. It will feature a digital version of the workbook, access to the Skool community, and a curated library of resources, including tools, prompts, and tutorials.
- **Skool Community:** The Skool community will be the heart of the Imaginarium ecosystem, providing a vibrant and supportive environment for learners to connect, collaborate, and grow together.

The Imaginarium Workbook incorporates several distinct series and content brands, each serving a specific purpose within the curriculum. These brands provide a unique lens through which to explore the concepts and tools presented in the workbook, offering specialized deep dives and practical applications of the core material.

The **7 Days Skooly** brand represents a week-long, intensive learning sprint integrated within the workbook. Each day focuses on a specific skill or project, guiding the learner through a structured and accelerated path to mastery. This serves as a practical, hands-on component of the curriculum, allowing learners to apply theoretical knowledge to real-world scenarios.

The **Skooly Red on Skooly** content series focuses on the practical application of the Imaginarium Workbook's teachings within the Skool community platform. It provides tutorials, case studies, and best practices for building and managing a thriving learning community, leveraging Skool's features to enhance the educational experience. This brand bridges the gap between the workbook's content and its community-based application.

The **Napoleon Pill, Pill Valentine, and Pill Prophecy** family of brands delivers concise, powerful insights and actionable advice, presented as 'pills' of wisdom. The **Napoleon Pill** offers strategic and tactical knowledge, drawing parallels to historical and military strategies adapted for the digital age. **Pill Valentine** focuses on the passion and creativity in content creation, offering inspiration and motivation. The **Pillar Prophecy** provides foundational, forward-looking principles that underpin the entire curriculum, offering a glimpse into the future of AI and content creation.

The **Streaming (Vids, Music)** brand is dedicated to the art and science of creating streaming content. It provides in-depth tutorials and workflows for producing high-quality videos and music using the AI tools and techniques covered in the workbook. This series is a practical guide for learners who wish to specialize in content creation for platforms like YouTube, Twitch, and Spotify.

Finally, the **Stream Chaserz (Econs)** brand delves into the economic aspects of content creation and streaming. It provides a framework for understanding the creator economy, monetization strategies, and the business side of being a digital creator. This series is designed for learners who want to turn their creative passions into sustainable careers.

4. Daily Practice Schedule: The AI Creator's Routine

To foster consistent learning and skill development, the Imaginarium Workbook integrates a structured daily practice schedule (8 AM - 8 PM EST). This routine is designed to immerse learners in the practical application of AI tools and concepts,

ensuring regular engagement and progressive mastery. The schedule is flexible enough to accommodate individual learning paces while providing a robust framework for daily progress.

Sample Daily Routine

Time Slot	Activity	Focus Area	Tools Utilized
8:00 AM - 9:00 AM	Morning Ideation & Planning	Brainstorming, Content Strategy	NotebookLM, Claude Opus/Cowork
9:00 AM - 11:00 AM	Prompt Engineering & Content Generation	Crafting effective prompts, initial content drafts	Claude Opus/Cowork/Code, Antigravity, Higgsfield AI
11:00 AM - 12:00 PM	AI Video/Audio Asset Creation	Generating visual and auditory elements	Higgsfield AI, Eleven Labs/Suno
12:00 PM - 1:00 PM	Lunch & Learning Break	Review, light reading, community check-in	Skool Community
1:00 PM - 3:00 PM	Video Editing & Post-Production	Assembling and refining video content	CapCut/DaVinci
3:00 PM - 5:00 PM	Workflow Automation & Integration	Building and optimizing AI workflows	Opus Clips/N8N
5:00 PM - 6:00 PM	Review & Refinement	Self-assessment, content iteration	NotebookLM, Claude Opus/Cowork
6:00 PM - 8:00 PM	Community Engagement & Homework	Collaboration, problem-solving, project work	Skool Community, Help Wanted Section

This schedule is a guideline, encouraging learners to dedicate specific blocks of time to different aspects of AI content creation. It ensures exposure to a wide array of tools and techniques, reinforcing the concepts taught in the workbook chapters through consistent practice.

5. Homework, Challenges, and Community Elements

The Imaginarium Workbook is designed to be an interactive and engaging learning experience, integrating homework assignments, creative challenges, and robust community elements to reinforce learning and foster collaboration. These components are crucial for practical skill development and for building a supportive network among learners.

Homework Assignments

Each chapter concludes with practical homework assignments that encourage learners to apply the concepts and tools discussed. These assignments are designed to be progressive, starting with foundational tasks and advancing to more complex projects. Examples include:

Homework assignments include **Prompt Engineering Exercises**, where learners craft prompts for specific AI models to achieve desired outputs. They will also engage in **Mini-Project Builds**, developing small AI-driven workflows or content pieces using tools like N8N. **Tool Exploration Reports** will require researching and documenting the capabilities of new AI tools, and **Content Creation Drills** will involve generating short videos, audio clips, or written content using various AI platforms.

Challenges

Challenges are integrated throughout the workbook to push learners beyond their comfort zones and encourage innovative problem-solving. These can range from short, focused tasks to more elaborate, multi-day projects. Examples include:

Challenges include **“Vibe Coding Mega Prompts” Challenges**, where learners develop highly effective and creative prompts for specific AI generation tasks. **“Suno Made Songs” Contests** encourage the creation of original music tracks using AI tools and sharing them with the community. **“Higgsfield Tools/PDFs/Prompts” Application Challenges** involve utilizing Higgsfield AI for specific tasks, such as generating PDFs or complex prompts. Additionally, **“New Tools” Exploration Challenges** task learners with identifying and experimenting with emerging AI tools and reporting on their potential applications.

Community Elements

The Skool community platform serves as the central hub for interaction, collaboration, and support within the Imaginarium Workbook ecosystem. It facilitates peer-to-peer learning and provides direct access to instructors and mentors.

Within the Skool community, a **Skool Schedule** outlines live sessions, Q&A forums, and collaborative workshops, ensuring learners have opportunities for real-time engagement. **Best Of/Top Ten Lists** are community-curated, showcasing outstanding projects, prompts, and tools, thereby fostering a culture of excellence and sharing. A dedicated **Help Wanted Section** provides a forum where learners can post questions, seek assistance on projects, or offer their expertise to others, promoting a collaborative problem-solving environment. Furthermore, opportunities for **Feedback and Peer Review** are provided, allowing learners to receive constructive feedback on their assignments and challenges from peers and instructors.

These integrated elements ensure that the learning process is not solitary but a dynamic, community-driven journey, preparing learners not just with skills but also with a network of fellow AI creators.

6. Suggested Delivery Format

The Imaginarium Workbook is envisioned as a multi-modal educational product, leveraging the strengths of various platforms to provide a comprehensive and engaging learning experience. The suggested delivery format includes a physical workbook, a dynamic web application, and an interactive Skool community resource.

Physical Workbook

The physical workbook serves as the core, tangible component of the Imaginarium curriculum. It will contain:

The physical workbook will contain **Detailed Chapter Content**, encompassing all theoretical explanations, learning objectives, and key content outlined in the curriculum. It will also feature **Exercises and Worksheets** with dedicated spaces for learners to complete prompt engineering exercises, workflow designs, and other practical tasks. **Reference Guides** will provide quick-reference sections for AI tools, prompt structures, and camera movement lists. Additionally, **Journaling Sections** will

offer areas for reflection, idea capture, and progress tracking. To bridge the physical and digital experience, **QR Codes/Links** will be integrated, directing learners to supplementary online resources, video tutorials, and the web application.

Web Application

The web application will complement the physical workbook by providing dynamic, interactive, and up-to-date resources. It will serve as a digital extension of the learning experience, offering:

The web application will offer **Interactive Tutorials**, providing step-by-step guides for using various AI tools, complete with live demonstrations and code snippets. It will also include **Prompt Builders**, which are interactive tools for constructing and testing prompts for different AI models. Learners will have access to **Workflow Templates**, which are downloadable and customizable templates for AI-driven workflows. A comprehensive **Resource Library** will serve as an updated repository of new AI tools, research papers, and best practices. For personalized learning, **Progress Tracking** will be available through a dashboard where learners can monitor their progress through the curriculum and assignments. Finally, a curated collection of **Video and Audio Examples** of AI-generated content will be provided to inspire and demonstrate possibilities.

Skool Community Resource

The Skool community will act as the central hub for learner interaction, collaboration, and ongoing support. It will facilitate a vibrant ecosystem where learners can:

Within the Skool community, learners can **Engage in Discussions**, participating in forums to discuss concepts, share insights, and troubleshoot challenges. They will have opportunities to **Collaborate on Projects** with peers on group assignments and creative challenges. Learners can also **Access Live Sessions**, joining Q&A sessions, workshops, and guest speaker events. The platform will facilitate **Mentorship**, connecting learners with experienced AI creators and instructors for guidance and feedback. To foster recognition and improvement, learners can **Showcase Work**, sharing their AI-generated content and projects with the community for feedback. Finally, the **Help Wanted Section** allows learners to get assistance or offer help to others, fostering a strong sense of community and mutual support.

This integrated approach ensures that learners receive a holistic educational experience, combining the structured learning of a physical workbook with the dynamic and collaborative nature of digital platforms.
