

IMAGINARIUM CLASS 2 — BUILD PHASE MISSION PLAN V2.0

KTL University × NETERVERSE

Session Date: Feb 13, 2026 | Status: MISSION ACTIVE

SECTION 1: MISSION BRIEF

"Stop just learning. Start making. Tonight we build your first AI helper together."

Mission Overview:

Class 2 is the activation sequence – the moment the cohort crosses from knowledge into execution. Every builder leaves with a working AI tool. No exceptions. Done is better than perfect. Small build, BIG momentum.

SECTION 2: PRE-ENTRY CHECKLIST (CLASS 1 CARRY-OVER)

#	TASK	STATUS REQUIRED
1	✓ Kimi Claw deployed & configured	ONLINE
2	✓ First scheduled task running → posted to LiveLog	ACTIVE
3	✓ 1 new skill added from ClawHub OR Manus Skills	MOUNTED

#	TASK	STATUS REQUIRED
4	✔ 3 humans invited to test automation	VERIFIED
5	✔ 'Initiate' Badge earned on Leaderboard	EARNED

CRITICAL NOTE:
No evidence = no entry. Consistency is the first filter. This is not school – it's an accelerator.

SECTION 3: TRAJECTORY CONTEXT

[LEARN ✔] → [BUILD ← WE ARE HERE] → [LAUNCH] → [OWN]
Days 1-20 Days 21-50 Days 51-75 Days 76-90+

Class 2 sits squarely in the BUILD phase. The work here is hands-on, not conceptual. Every minute of the session should produce something deployable.

SECTION 4: SESSION OBJECTIVES (5 EASY WINS)

TERMINAL

- ❑ 01 – CREATE CLAUDE ACCOUNT → Free setup, 2 minutes max
- ❑ 02 – SAY HELLO TO CLAUDE → First AI conversation live
- ❑ 03 – DEPLOY KIMI CLAW → Browser agent, 5 min, zero setup
- ❑ 04 – RUN FIRST AUTOMATION → Pick 1 ClawHub skill, fire it
- ❑ 05 – SHARE WIN IN DISCORD → Post to #wins, celebrate with squad

SECTION 5: THE NEW DUAL-AGENT STACK

Understanding the infrastructure that replaced MemuBot. This is not a tool swap. This is an architectural evolution.

ELEMENT	OLD STACK	NEW STACK
Agent	MemuBot	Manus AI + Kimi Claw
Architecture	Single proactive bot	Dual-agent orchestration
Intelligence	MemuBot's built-in	Manus (multi-agent) + Kimi K2.5 (Swarm)
Setup	Telegram + VPS	Cloud-native, browser-first, NO VPS
Skills	Pattern Library (manual)	ClawHub (5,000+ skills) + Manus Skills
Autonomy	Reactive + scheduled	Fully autonomous, self-directing
Memory	Session-based	Persistent cross-session + 40GB storage

SECTION 6: AGENT PROFILES — KNOW YOUR SOLDIERS

AGENT 01: MANUS AI

Role: The Executor // Business Automation Engine

"It doesn't answer questions. It delivers results."

Manus is a general-purpose autonomous AI agent that runs inside its own cloud virtual machine. You give it a goal. It plans, executes, and ships – end to end.

AGENT 02: KIMI CLAW

Role: The Always-On Operator // Browser-Native

"OpenClaw in your browser. No VPS. No terminal."

Kimi Claw is OpenClaw running natively in the cloud – powered by Kimi K2.5. It runs 24/7 executing scheduled tasks without you touching a thing.

 **Browser Control** – Navigates web, operates apps

 **Multi-step Tasks** – Research → build → deliver

 **Connectors** – Plugs into Gmail, Notion, Slack

 **Async Cloud Exec** – Runs in background

TERMINAL

✓ B2B research + outreach workflows
✓ Content pipelines (research → draft)
✓ Lead generation + CRM management
✓ Building MVPs with minimal code

Setup: < 15 mins
Access: manus.im

 **Browser-native** – Zero VPS, one-click deploy

 **Scheduled Tasks** – Daily ops, monitoring

 **ClawHub** – 5,000+ community skills

 **Agent Swarm** – Coordinates 100 agents

TERMINAL

✓ Scheduled daily operations ✓
Passive monitoring + alerts ✓
24/7 community engagement ✓
Coding + technical autonomous tasks

Setup: < 5 mins
Access: kimi.com

SECTION 7: HOW THE DUAL STACK WORKS TOGETHER

TERMINAL

IMAGINARIUM AGENT STACK v2.0 |

MANUS AI | KIMI CLAW | | (Executor) | (Operator) |

Complex tasks | Scheduled daily tasks | | Business ops | Passive monitoring
| | Research + docs | 24/7 autonomous runs | | Multi-app flows | Community
engagement | | Connectors | ClawHub skill execution |

CLAUDE (Intelligence Layer) | | Elevates quality. Reasons. Creates. |

PATTERN LIBRARY (The DNA) | | Prompts + Workflows + Skills – the shared
brain |

The Strategy:

- **Kimi Claw** = your always-on operator running the daily rhythm
- **Manus AI** = your heavy-hitter executor for complex multi-step operations
- **Claude** = the intelligence layer that elevates quality across both agents
- **Pattern Library** = the DNA that feeds both systems with proven logic

SECTION 8: BUILD PHASE MILESTONES

Node	Milestone	Agent	Status
01	Setup – Account + Kimi Claw deploy	Kimi Claw	TONIGHT
02	Auth – API Keys, Security	Both	TONIGHT
03	Messages – First Claude conversation	Claude	TONIGHT
04	Streaming – Real-time responses	Claude+Kimi	NEXT
05	Pattern – ClawHub skills + Prompts	Kimi+Claude	NEXT
06	Orchestrate – Manus Multi-step flows	Manus AI	LOCKED
07	Deploy – Manus Connectors	Manus AI	LOCKED
08	Demo – Ship It & Show It	Full Stack	LOCKED

SECTION 9: SESSION ARCHITECTURE

PHASE 1 — GATEWAY & ORIENTATION

Objective: Set psychological safety. Remove all friction. Orient to the journey.

FACILITATOR NOTE: Read the room. If anyone looks lost or nervous, slow down here. This gateway phase exists to dissolve resistance before the build starts.

PHASE 2 — TOOL ONBOARDING

Objective: Get every builder into Claude Web + deploy their first agent.

- 1. **Claude Setup:** Visit [claude.ai](#) → Sign Up → Verify.
- 2. **Security Brief:** API keys = credit cards. Password manager mandatory.
- 3. **Kimi Claw Deploy:** Visit [kimi.com](#) → Enable "Kimi Claw" (One-click). Agent is LIVE.
- 4. **Pick Workspace:** Claude Web (Work) + Notion (Save) + Discord (Wins).

PHASE 3 — FIRST CONTACT

Objective: Run the Hello World sequence.

TERMINAL

"Hi Claude, I'm new to AI. Can you help me write a 2-sentence bio for my LinkedIn? Keep it friendly but professional."

Why this works: 1. Context ("I'm new") 2. Style ("Friendly but professional") 3. Constraint ("2-sentence").

PHASE 4 — MISSION SELECTION

Chatbot vs. Agent Distinction:

MODE	AGENT	BEHAVIOR
Chatbot	Claude Web	Reactive (You ask → It answers)
Proactive Agent	Kimi Claw	Runs scheduled tasks 24/7 autonomously
Heavy Executor	Manus AI	Multi-step complex delivery (Class 3+)

SECTION 10: THE THREE MISSIONS

MISSION 01 — DAILY AFFIRMATION BOT

Agent: Kimi Claw

Setup: 2 min

Zero Code

INPUTS: Your Name + Current Mood

OUTPUT: 3 personalized affirmation options delivered automatically every morning.

TERMINAL

```
1. Go to kimi.com → Enable Kimi Claw 2. Open ClawHub → Search "Daily Affirmation" skill 3. Install skill → Fill [YOUR NAME] + [YOUR MOOD] 4. Set schedule: "Every morning at 8AM" → Activate 5. Kimi Claw runs it automatically. 6. Post screenshot to #wins
```

WHY IT WORKS: This replaces reactive "I have to remember to do this" with proactive "It just happens." The agent becomes your morning ritual architect.

MISSION 02 — RESEARCH HELPER

Agent: Manus AI

Setup: 5 min

Zero Code

INPUTS: 3-5 web article URLs

OUTPUT: Formatted report with bullets + takeaway + sources.

TERMINAL

```
1. Go to manus.im → Create account 2. New task → Paste URLs 3. Command: "Summarize these into 5 bullets + key takeaway + source list. Format as a clean report." 4. Manus reads, reasons, and delivers a DOC. 5. Save output → Post to #wins
```

WHY IT WORKS: Manus doesn't just summarize – it READS the web, synthesizes insights, and produces a deliverable document.

MISSION 03 — EMAIL DRAFT ASSISTANT

INPUTS: Incoming email + Intent + Tone

OUTPUT: Polite, clear reply draft ready to send.

TERMINAL

1. Manus → Connectors → Link Gmail (optional) 2. New task: "Draft a polite reply. Tone: [Friendly]. Intent: [Say yes but later]." 3. Paste email OR let Manus read from Gmail. 4. Review draft → Send. 5. Post to #wins

WHY IT WORKS: Manus connects to real apps. It's drafting inside your actual workflow. This is infrastructure, not a toy.

SECTION 11: TROUBLESHOOTING GRID

GLITCH	FIX
Stuck / Frozen	Hit refresh or click "Retry"
Wrong Length	Be specific: "Give me exactly 50 words"
Agent Not Running	Check Kimi Claw schedule / Manus task status
Totally Lost	Post in #help channel

SECTION 12: SECURITY BRIEF (CRITICAL)

- API key / account = digital vault. Never share.
- Connector permissions = grant only what's needed.

KIMI CLAW

- K2.5 model has system-level access – review skill permissions.
- Use in private test channel before live deploy.

BOTH

- Store credentials in 1Password / Bitwarden.
- If compromised → revoke immediately.

SECTION 13: WIN CEREMONY & BUILDER BADGE

BUILDER BADGE ACTIVATED

Requirements:

✓ Kimi Claw deployed + first scheduled task ACTIVE

OR

✓ Manus AI task completed + deliverable saved

**YOU ARE NO LONGER A CONSUMER.
YOU ARE A BUILDER.**

SECTION 14: FACILITATOR TIMING GUIDE

Segment	Time Block	Duration
Opening + Gateway	8:00 PM	10 min
Trajectory Context	8:10 PM	5 min
Onboarding	8:15 PM	15 min
Hello World	8:30 PM	20 min
LIVE BUILD (Missions)	8:55 PM	45 min
Win Ceremony	9:50 PM	10 min
Total Runtime: 2 Hours		

SECTION 15: THE DOCTRINE SUMMARY

CLASS 2 LAW:

Done > Perfect
Chatting → Architecting
Consumer → Creator
Learning → Shipping

THE STACK:

Kimi Claw runs the ops.
Manus executes the missions.
Claude elevates the intelligence.
The Pattern Library is the DNA.
Together – they're a full civilization.

BUILD. SHIP. OWN.
